EDUCATION

Bandung Institute of Technology (ITB), Bandung
Computer Science

Aug 2023 – Present

PROFESSIONAL EXPERIENCE

KAT ITB, Bandung

Apr 2026 – Jun 2026

Backend Developer (Volunteer)

- Developed backend services for KAT ITB's e-commerce platform, supporting authenticated onboarding and role-based product discovery flows.
- Built API workflows for product catalog access, category-based filtering, and product detail retrieval, with structured request validation and reliable data access for shopping and checkout preparation processes.

Imahnoong, Bandung

Feb 2026 – May 2026

Software Engineer (Internship)

- Developed frontend and dashboard features for C-29 Times, a desktop-based Islamic astronomy application supporting calendar generation, date conversion, and moon-visibility analysis workflows.
- Implemented JD/WD display integration, calendar support, real-time date handling, and moon-phase visualization to help users interpret complex astronomical calculations through a clearer dashboard interface.

Direktorat Sarana Prasarana & Sistem Informasi ITB, Bandung

Oct 2025 – Mar 2026

Software Engineer (Contract)

- Built an end-to-end reporting system for the eFacility web platform, covering report submission, status transitions, technician assignment, and resolution tracking.
- Developed an administrative dashboard visualizing reports by category, status, priority level, and time-based trends to support operational monitoring, workload evaluation, and data-driven decision-making.

Ralat.ind, Bandung

Aug 2025 – Nov 2025

Frontend Engineer (Internship)

- Assisted in developing an adaptive learning platform by implementing flashcard-based learning, gamified progress tracking, and user engagement features.
- Translated evolving product requirements into functional homepage, dashboard, and learning workflows to support UTBK preparation through iterative product development.

Bengkel Code, Bandung

Jun 2025 – Oct 2025

Software Engineer (Contract)

- Contributed to the development of the MPM UPNVJ official website by redesigning pages, improving layout consistency, and implementing mobile-responsive interfaces.
- Integrated website forms with Google Sheets, developed downloadable digital booklet pages, and performed error-handling simulations to improve system reliability.

ARKAVIDIA, Bandung

Nov 2024 – May 2025

Data Science Academy Staff

- Served as Liaison Officer for one of 8 participant groups in a 6-day Data Science bootcamp, supporting communication, mentor coordination, and participant guidance.
- Acted as Master of Ceremony during bootcamp sessions, facilitating announcements and transitions between expert speakers, mentors, and participants.

- Assisted and supervised 2 sessions of Berpikir Komputasional practicum, each equivalent to 2 credit hours.
- Assessed Python-based coding work completed by approximately 70 participants across 3 practicum sessions.

ACHIEVEMENTS

2nd Place Winner – Nitro UMP Hackathon, Purwokerto May 2026

Awarded second place for developing Karsa, a KKN-based digital platform designed to extend the impact of university community service into internship and recruitment opportunities.

1st Place Winner – IT FAIR XIV Hackathon, Bandung Dec 2025

Awarded first place for developing MBG, a data-driven transparency platform for school meal distribution under the theme Smart Solutions with AI & Blockchain.

1st Place Winner – Web Dev Competition S-Technophilia, Purwokerto Oct 2025

Achieved first place for building KKN-Go, a web platform designed to enhance efficiency, transparency, and real-world impact of university community service programs.

Best Team as Software Engineer Pakansuper 2023, Bandung Dec 2023

Selected as the best Team among Top 9 Teams 2023 & and represent the campus at bigger events.

CERTIFICATIONS

IBM Generative AI Engineer Feb 2026

Completed a 16-course program covering generative AI, LLMs, prompt engineering, transformers, fine-tuning, RAG, LangChain, PyTorch, Hugging Face, and NLP-based application development.

PROJECTS

MBG – Makan Bergizi Ga Bocor (AI & Blockchain Transparency Platform)

Tech Stack: Python, Scikit-Learn, NLTK, Next.js, Solidity, Ethereum, Supabase

- *Developed an AI-powered transparency platform for Indonesia's school meal program, combining priority-area analysis and public monitoring dashboards.*
- *Built an NLP pipeline to analyze public sentiment from social media comments, applying text preprocessing and machine learning classification to identify community perception trends.*
- *Integrated blockchain smart contracts to improve accountability and traceability of fund allocation and distribution processes.*

SKILLS

- **Software Development:** React.js, Next.js, Tailwind CSS, Angular.js, Laravel, Fast API, Flask, Prisma
- **Database Management:** Neon Console, PostgreSQL, MongoDB, Supabase, VectorDB
- **Programming Languages:** Python, Java, Javascript, Typescript, Golang, Haskell, PHP, C#
- **AI Development:** FastAPI, Flask, Scikit, TensorFlow, PyTorch, LLM, RAG, LangChain, LangGraph
- **Project & Event Management:** Event planning, team coordination, performance evaluation
- **Soft Skills:** Leadership, public speaking, problem solving, time management, analytical thinking
